

Getting your recycling wrong could mean that your wheelie bin is not emptied, as the contents might endanger staff, break machinery or contaminate other recyclables causing them to be disposed of in a landfill.

Did you know?

The districts kerbside recycling goes to the Material Recovery Facility (MRF) in Palmerston North to be sorted.

Recycled glass is sent to Auckland to be made back into glass bottles and jars.

Recycled cardboard and paper gets remade into cardboard boxes and paper towels.

Frequently Asked Questions

How do I know what type of plastic it is?

When you buy something in plastic, producers should have a triangle with a number inside it. This indicates what type of plastic this is, and helps us to determine what is recyclable and what isn't.

What should I do if my plastic doesn't have a number on it?

Place it in your waste bin or council rubbish bag as we can't determine what type of plastic it is.

What time do I need to have my bin out by?

Recycling wheelie bins and crates need to be placed kerbside by 7.30am on collection day to ensure collection.

What date is my recycling collection?

Your kerbside recycling is collected every two weeks, and your recycling bin and crate are collected on the same day.

You can check your next collection date on our website using My Area.

If in doubt...

Phone Council or place in rubbish bag/bin.

Don't forget

Rinse all recyclables to remove food/liquid to avoid contamination. If unable to be rinsed properly, it cannot be recycled.

If your recycling smells, it's likely to be contaminated and not acceptable for collection.

Please do not stack glass above the top of the crate.

Make sure you are able to shut the lid on the recycling bin.

Do not recycle lids.

RECYCLING WHEELIE BIN

What CAN I put in my recycling wheelie bin?

Below are some of the most common items
